

Joget AI Designer API Server Deployment Checklist

Pre-Deployment

- ☐ Verify server meets minimum specifications (4GB RAM, 4 cores).
- ☐ Install Docker or configure a Kubernetes cluster.
- ☐ Plan network architecture (separate vs same server).
- ☐ Configure firewall rules for port 8000.
- ☐ Ensure network connectivity between Joget DX and the Intelligence server.

Deployment

- ☐ Pull/build Joget Intelligence Docker image.
- ☐ Configure resource limits (4-6GB memory).
- ☐ Start the container/pod and verify port 8000 is accessible.
- ☐ Test connectivity from the Joget DX instance.
- ☐ Install and configure the AI Designer plugin in Joget DX.
